METRION

— THE ENGINE OF GROWTH —

: The OS for Entrepreneurs :

Metrion - AI - Powered Profit Optimization OS first target the indian e-Com Sellers then Other businesses.

Metrion MVP V1.0 :-

CEO Agent is the Sole Customer facing interface & routes internally do 4 agents :-

Product Intelligence Agent :-

- Scrape / Analyze top Products from marketplaces.
- Analyze there Customer reviews & other information
- Find the recent & best Supplier.
- Analyze the google trend & graphs.
- Give all this data do CEO

Competitor Intelligence -

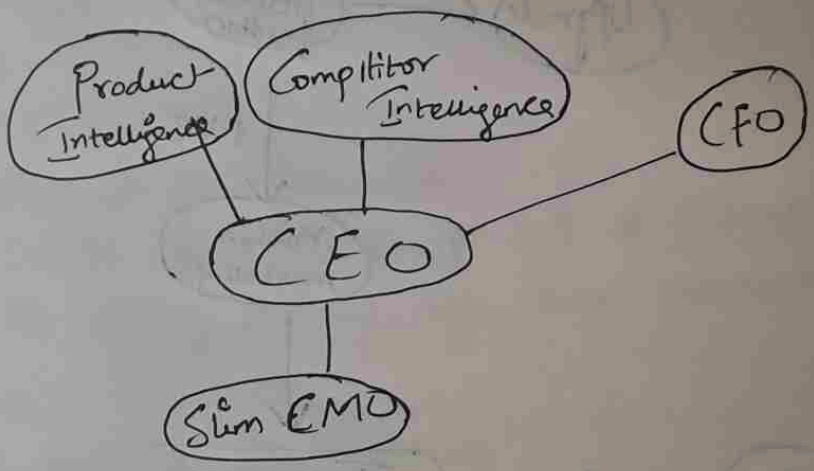

- True Margin engine.
- Compititor price & reviews guard.
- Margin Maths & WhatsApp alert.
- Analyze & ~~Suggest~~ the title, keywords & other things of Compititor by help of CMO.

CFO :-

- Recommends Selling Price, batch Size, Supplier ranking
- GST Calculation
- Marketplace reconciliation. + MTR Analysis.
- Expense tracking
- Cash-flow tracking
- Profit Cal
- Margin Cal
- Pricing recommendation
- funding readiness

Slim CMO (V-1.0) :-

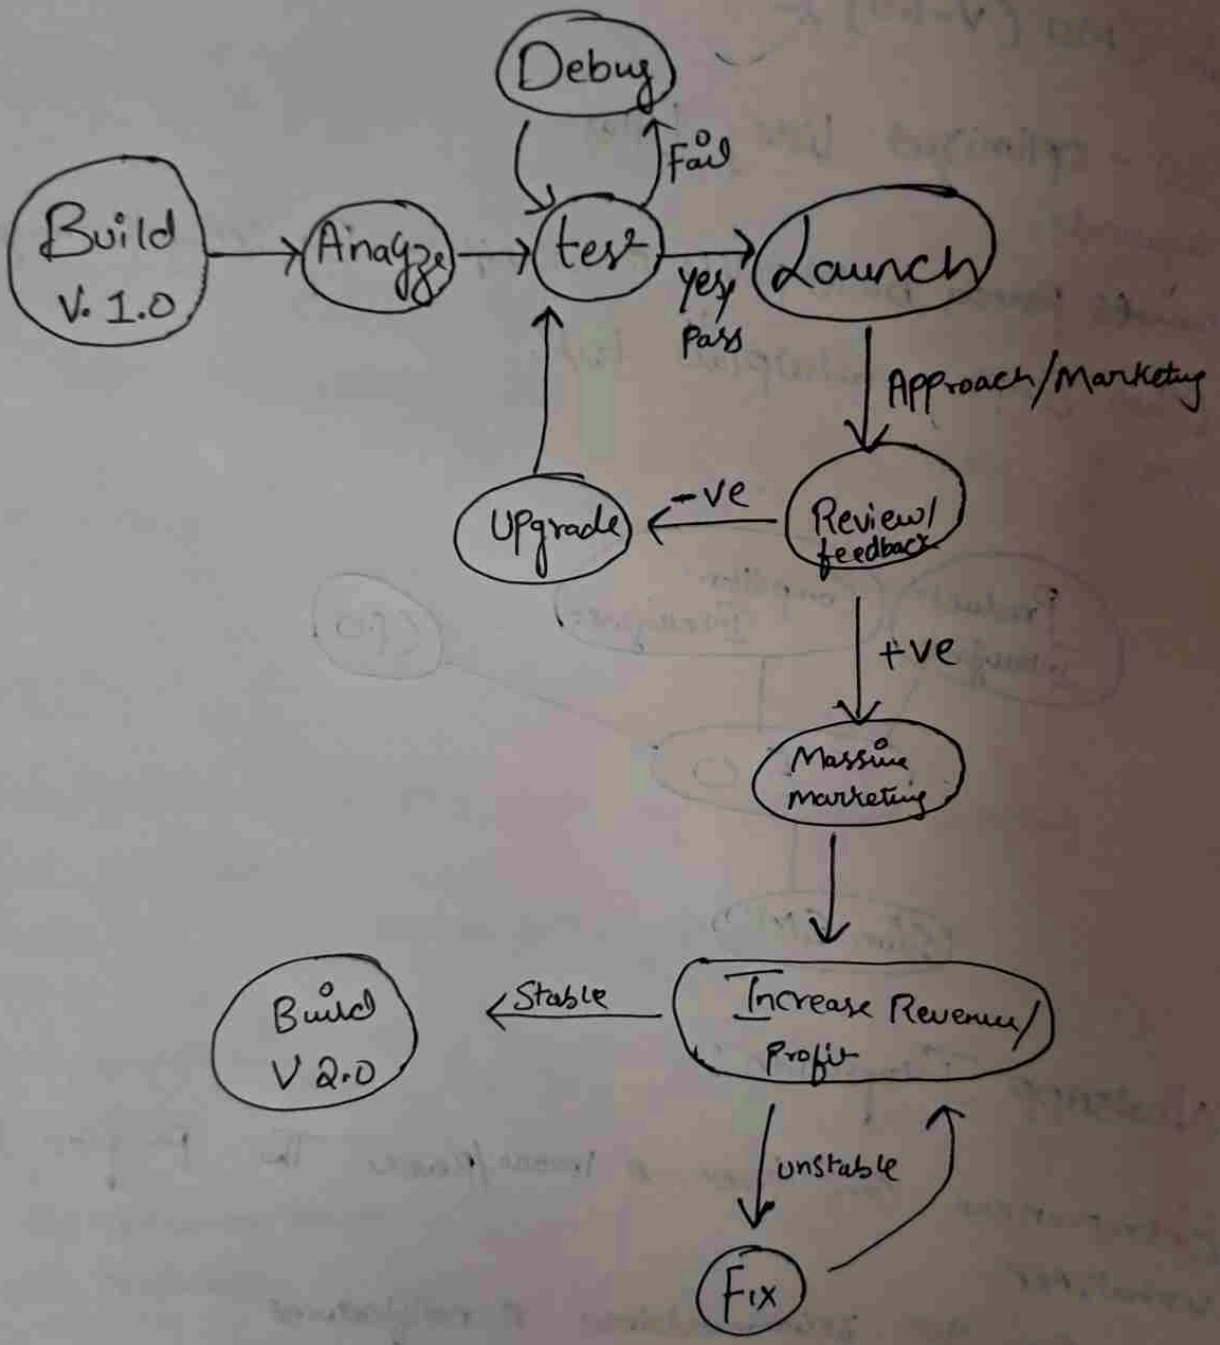

- SEO - optimized listing titles
- Keywords
- ~~bullets~~ points bullet points & Discription By seeing the image.
- Other Simple Marketplace task.

WhatsAPP Integration :-

- Entrepreneur Can track & invoke/Revoke The Progress through WhatsAPP.
- They Can get recommendations & notifications.
- Communicate CEO

Future Vision :-

→ Upgradations :-

Product Intelligence

- Analyze Insta & yt trends algo.

- CMO :-

Full CMO

- Product Pic generation.
- Posters, Captions, Insta, yt title & Discription.
- All Catlog details of each marketplace

- CFO :-

- Taxations & legal policies.
- Advace finance tracking.
- ML Algos to predict future sells.
-

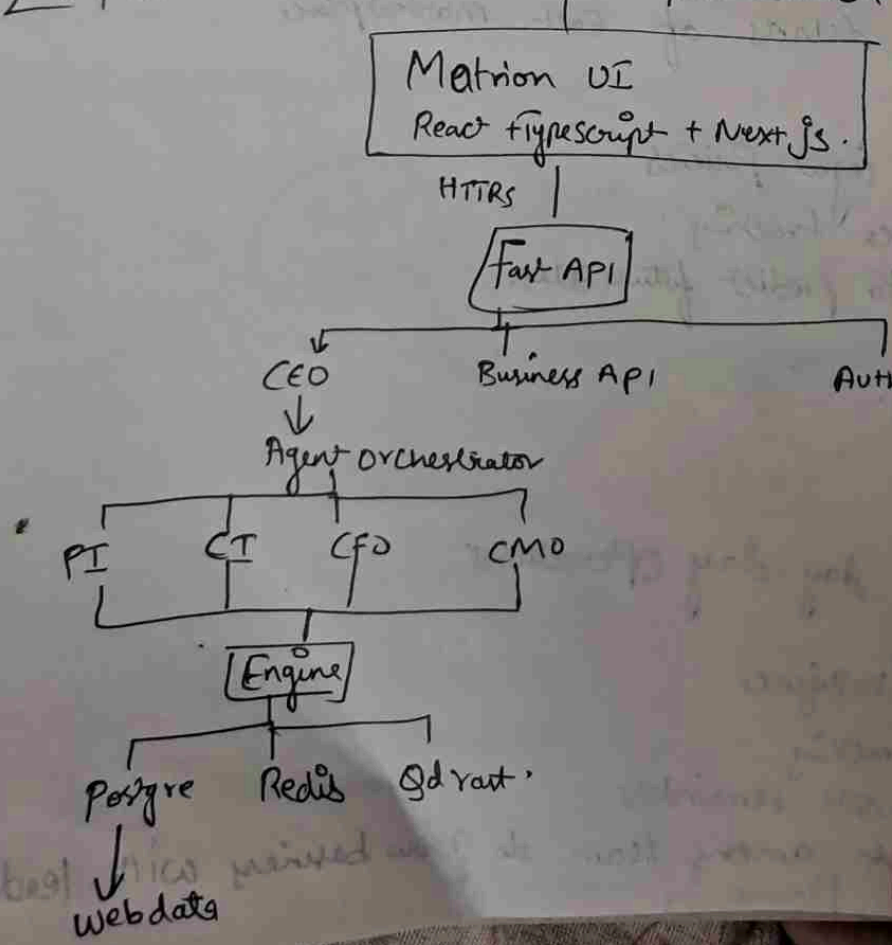

→ New Updates

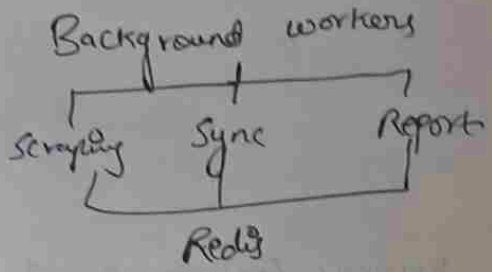

- COO
- Manage All day-day operations
- HR works
- Document Intelligence
- Whatsapp tracking
- Meetings & work remainders
- Divide task among team to grow barriers with leader

Permissions

- Start Agent
  - Help new Seller to Start there businesses
  - Create Roadmap.
  - Track Roadmap.
  - Analyze there Obstacal & tell alternatives ways.
  - Suggestions

Expected Architecture & TechStack :-

Tech Stack :-

FrontEnd :-
React + TypeScript + Next js

API :-
FastAPI + Pydantic.

Backend :-
Python,

DB :-
- PostgreSQL
- Redis
- Qdrant
- SqlAlchemy & Alembic.

Deployment :-
AWS / Railway / render / Claude Fare.

→ Update:-

1) Adding Leak Shield - E-Com revenue Leakage agent.

- If Calc Orders + Settelements + returns + logistics.

→ reconcile transactions
→ Calc margins & actual rate
→ detect anomaly.
→
This power we give to Our CFO (For simple Calc we just use Python rather than LLM to save tokens)

2) E-Com Calculator website.

- Take parameters like Product price & ~~GST~~ expenses, marketplace fee etc Calc the Profit/Loss

→ Params :-
- Actual price
- Selling price
- Packing
- GST
- Others

Then Calc all thing.

3) Same Calculator we Add in our webAPP (metrics) for easy ~~Cost~~ & ~~Cost~~ Calculation.

→ Pre Planning :-

- Marketplace API fails Sometime, Handle this Situation by Taking the Old means 10-15 min before records.
- Every Costmer data / query not disturb Other's.
  - Customer A has his data
  - Customer B has his data.
- Data Base failure Plan.
  - Use Strong backup System.
- Use Optimized LLM Calls.
  - Simple Calc → Python / SQL
  - Aggregation → SQL
  - Anomaly → ML
  - Explanation → LLM
- Marketplace Charge fee's gradually
  - Dont hardcode fee like 3%.
  - Use Updated knowledge.
- Handle Incomplete / missing Data Before giving any recommendation

→ Reduction of Latency :-

for " Why did my Profit decreases this week? "

Bad architecture :-

user → API → LLM → Tool1 → LLM → Tool2 → ——→

Instead :

user

↓

FastAPI

↓

Parallel data retrieval

- Sales
- Profit
- Ads
- Inventory

↓

BI

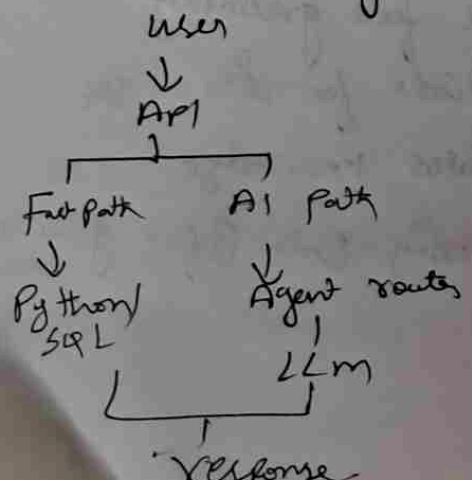

↓

one LLM Call

↓

user.

→ Metrion Shoud use a Hybrid path.

Why we use Redis DB?

- It used to Store the frequently ask questions like Caches.
- Background Jobs
  - Jobs/queue
- Session ID
- Rate limiting

Problem :-

If Seller having large massive amount of data like a MTR Excel sheet of 10000+ Cols & 15+ rows in each marketplace.

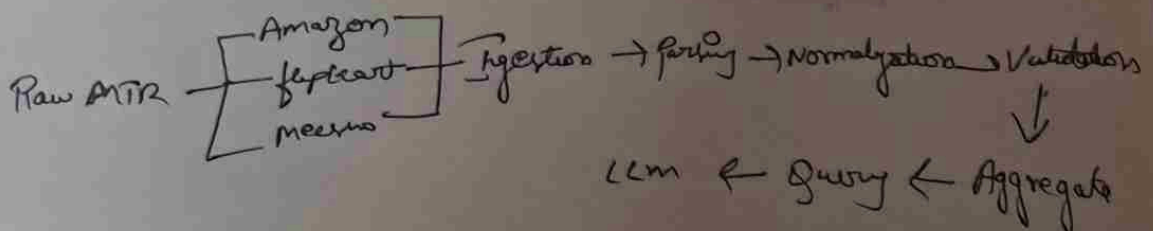

If user ask Calc Profit

If we feed all data to LLM then Context window exceeds

Solution :-

If user ask Calc Profit

then LLM Calls the Calculator tool, our Backend Calc Profit & give to LLM then it display Profit in proper format.

The Three Brain Architecture

Brain1 → Calculation Brain
Python + SQL + Logic
Calc revenue, fees, growth etc
No LLM

Brain2 → Intelligence Brain
ML / Statistical model
- anomaly detection
- forecasting
- trend detection
- risk scoring

Small LLM usage.

Brain3 → Communication / Reasoning Brain
LLM
- understand Natural Language
- Tool selection
- Response

LLM's are Stateless, (Not having memory)

- LLM = Brain
- Postgre DB = Long term memory
- Redis = Short term memory

Where we should implement RAG in Mebrion?

- Marketplace Policies

  Seller ask:-

  why did Amazon charge this fee?

  Mebrion retrieve relevant info from marketplace (using webSearch) & give to LLM

- Seller's Uploded docs.
  - Seller uplode all docs & ask queryes/queries.
  - base
- Policies Storage:-

  we store all policies in a knowledge base.

→ Conversation Sessions:

Suppose seller has:

Conversation :
↓
500 messages
↓
1000
↓
5000

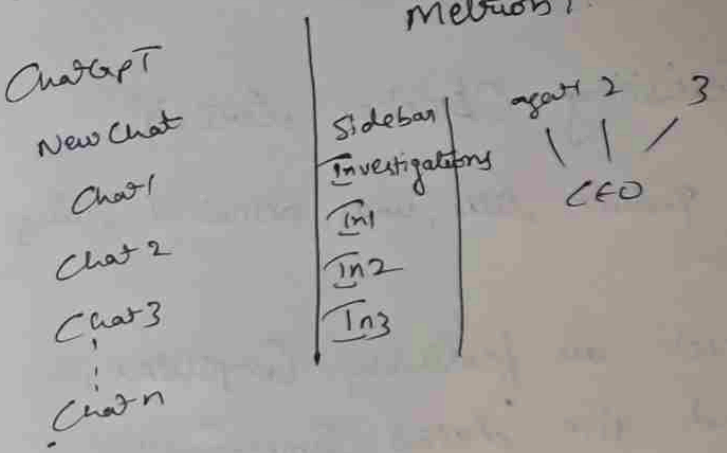

Never share all 5k to LLm.

→ Cookies Option:

use Cookies to remember things in browser

Instead of Sessions in ChatGPT we use Investigations Sidebar.

When user ask a ~~question~~ fresh question to metrion then automatically a new Investigation Created with ~~fresh~~ fresh context window.

If we want the things from previous investigation then we returns info from previous Investigation

Here we use a "Seperate investigation Memory".

* Free tool 2 *.

* Product/Profit Feasibility Checker tool *

- Seller enter the product title, units, actual & Selling Price then Submit
- Our platform Check all feasibility, Competitors, P&L & seller and give detail Summarized report to seller.

- Agent Connect or Pause Architecture :-
  - User get 2 Agents free with Some tokens.
  - If user has membership then it get Some agents
    or
    user Purchase agent from agent Cart also

So user Can Connect or Pause agent depending on requirement.

→ Tokens / limit Architecture :-

- CFO Consume more token like Claude opens.
- Then CI → PD.

Seller Could eventually have.

My metrics Team.

CEO	Include / active
Product	Include
Competitor	Include [⚠ But some tokens left]
CFO	To be Purchase
CMO	Pause

→ We can Create Our Own Mcp Server in which Seller Can Connect its their website, Chatgpt others

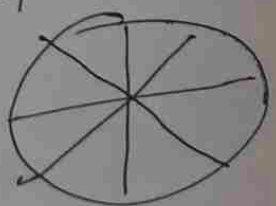

Optional, V1.5/2 Plan.

Metrion Marketing & Planning

- Free Tools
  1) P & L Calculator for e-com seller
  2) Product/profit feasibility checker.

- Metrion Partner Program :
  1) • Partner ↓ bring Seller
