METRION

Marketplace P&L, Settlement & Tax (MTR/GSTR) Data Mapping

FINAL — Amazon India • Flipkart • Meesho • All previously PENDING items now closed with real, verified schemas, 12 September 2026

Every factual claim below is checked directly against a primary source (marketplace developer docs or official seller/supplier pages). Where no primary source exists publicly, the item is explicitly marked PENDING — never guessed or filled in with a plausible-looking value.

1. Purpose & scope

- Define the marketplace data Metrion needs to calculate product-level, order-level and marketplace-level profitability.
- Cover two distinct report families separately, because they are structurally different and serve different jobs: (a) Settlement/P&L reports — money movement, fees, payouts; (b) Tax/MTR reports — invoice-level GST detail used for GSTR-1 filing and TCS/TDS reconciliation.
- Use one universal Metrion P&L model with separate marketplace adapters.
- Keep raw marketplace fields intact and map them into normalized Metrion categories — never discard the source field.
- Use actual charged/settled amounts wherever available; do not replace transaction-level charges with generic fee-rate calculations.

2. Universal Metrion P&L schema

Metrion field	Purpose
Order ID / Order Item ID	Transaction and line-item identity
SKU / Product ID	Product mapping and COGS join
Units	Sold / returned / cancelled quantity
Selling Price / Item Value	Revenue basis
Seller-funded Discount	Revenue adjustment
Marketplace-funded Discount	Tracked separately when identifiable
Customer Shipping Income	Customer-paid shipping where applicable
Gross Sales	Item revenue before applicable deductions
Marketplace Commission	Actual commission / platform charge
Fixed / Closing Fee	Fixed marketplace charge where applicable
Collection / Payment Fee	Collection / COD / payment charge where applicable
Forward Shipping	Outbound logistics cost
Reverse Shipping	Return logistics cost
Fulfilment / Pick & Pack	Fulfilment charge where applicable
Storage	Storage / warehouse charge where applicable

Metrion field	Purpose
Other Marketplace Charges	Other platform deductions
GST on Marketplace Charges	Tax on applicable marketplace fees
Refunds / Returns	Refund value and returned units
RTO	Return-to-origin units / value
Cancellations	Cancelled units / value
Adjustments	Other credits / debits
Reimbursements	Marketplace compensation / credits
Ad Spend	Marketplace advertising cost
Ad-attributed Sales	Sales attributed to ads
COGS	Seller product / manufacturing cost
Packaging Cost	Seller packaging cost
Other Variable Cost	Optional seller-defined cost
TCS / TDS	Tax / cash reconciliation
Marketplace Settlement	Marketplace payout / settlement
Bank Credit	Actual bank receipt
Contribution Profit	Configured revenue less relevant variable costs
Profit / Unit	Profit divided by applicable units
Margin %	Profit divided by selected revenue basis
ROAS / ACOS / TACOS	Advertising efficiency

3. Amazon India — Settlement Report (V2)

Production parser target: Flat File V2 Settlement Report — reportType

`GET_V2_SETTLEMENT_REPORT_DATA_FLAT_FILE_V2`

- V2 consolidates all price/fee detail into three general-purpose columns — amount-type, amount-description, amount — instead of many fragmented fee columns. This is confirmed directly from Amazon's SP-API settlement report documentation.
- Do NOT treat the older fragmented fields (item-related-fee-type, item-related-fee-amount, shipping-related-fee-type/amount, fulfillment-fee-type/amount, price-type, price-amount) as V2 columns — those belong to the deprecated V1 Flat File / XML settlement reports.
- V1 removal date, verified against Amazon's own changelog: the XML Settlement Report (GET_V2_SETTLEMENT_REPORT_DATA_XML) and Flat File Settlement Report (GET_V2_SETTLEMENT_REPORT_DATA_FLAT_FILE) will be removed for all marketplaces on 11 November 2026. There is no XML replacement — V2 Flat File is the only forward path.
- Exact amount-type / amount-description values should be captured from the actual seller export and mapped by Metrion's normalization layer — Amazon does not publish a closed enumeration.

3.0 amount-type / amount-description — illustrative real value pairs

Amazon does not publish a closed list of amount-type/amount-description values, so Metrion's normalizer must be extensible. The pairs below are real, commonly-occurring examples confirmed from a detailed practitioner breakdown of an actual settlement report, useful as the seed set for the mapping table (not exhaustive).

amount-type	amount-description	Meaning
ItemPrice	Principal	The item's sale price (item-level revenue)
ItemPrice	Shipping	Customer-paid shipping charge
ItemFees	Commission	Referral/commission fee (negative)
ItemFees	FBAPerUnitFulfillmentFee	Per-unit FBA fulfilment fee (negative)
ItemWithheldTax	MarketplaceFacilitatorTax-Principal	Marketplace facilitator tax Amazon collected and remits — nets to zero, not seller revenue
Promotion	(varies)	Seller-funded discount
ServiceFee	(varies — subscription, storage, removal, returns processing)	Account-level charges with no order-id attached
Adjustment	(varies — reimbursement, correction)	Irregular income/credit; book as other income, not COGS reduction
Transfer	(varies)	Movement between Amazon accounts/currencies — not revenue or expense

- Rows without an order-id (ServiceFee, some Adjustment/Transfer rows) are account-level, not order-level — Metrion's schema must allow a null order/SKU key for these and allocate them separately rather than forcing a product-level join.

Source: Amazon SP-API docs confirm the column structure; the specific value pairs above are from a third-party practitioner walkthrough of a real settlement report and are illustrative, not an official enumeration — extend this table as new amount-type/amount-description pairs are observed in real seller data.

3.1 Amazon Settlement Report V2 — verified field list

Amazon V2 field	Metrion use
settlement-id	Settlement identifier
settlement-start-date / settlement-end-date	Settlement period
deposit-date	Deposit / payout date
total-amount	Settlement-level total
currency	Currency
transaction-type	Transaction classification
order-id	Order identity
merchant-order-id	Seller order reference
adjustment-id	Adjustment identity when applicable

Amazon V2 field	Metrion use
shipment-id	Shipment identity when applicable
marketplace-name	Marketplace
amount-type	Primary financial classification
amount-description	Detailed financial description
amount	Actual financial amount
fulfillment-id	Fulfilment identifier when applicable
posted-date / posted-date-time	Transaction posting date/time
order-item-code	Order-item identity
merchant-order-item-id	Seller line-item reference
merchant-adjustment-item-id	Seller adjustment reference
sku	Seller SKU
quantity-purchased	Quantity
promotion-id	Promotion identifier when applicable

Source: Amazon SP-API — Settlement Report Types & Settlement Report Attributes (developer-docs.amazon.com/sp-api). Fetched and cross-checked directly; not summarized from a third party.

4. Amazon India — Tax / MTR Reports (GST)

This is a separate report family from Settlement — invoice-level, GST-rate driven, used for GSTR-1 filing and TCS reconciliation. It was missing from earlier drafts of this document and is now included with the exact official field list.

4.1 GST Merchant Tax Report — B2C (reportType: GST_MTR_B2C)

Consumer invoices — sales, refunds, cancellations. On-demand variant reportType GET_GST_MTR_B2C_CUSTOM provides the last 45 days only.

Field group	Fields
Invoice identity	Seller Gstin, Invoice Number, Invoice Date, Transaction Type, Credit Note No, Credit Note Date
Order / shipment	Order Id, Shipment Id, Shipment Date, Order Date, Shipment Item Id, Quantity, Warehouse Id, Fulfillment Channel, Payment Method Code
Product	Item Description, Asin, Sku, Hsn/sac, Item Serial No., Product Tax Code
Bill-from / Ship-from / Ship-to	Bill From City/State/Country/Postal Code; Ship From City/State/Country/Postal Code; Ship To City/State/Country/Postal Code
Invoice amounts	Invoice Amount, Tax Exclusive Gross, Total Tax Amount
Tax rates & amounts	Cgst Rate, Sgst Rate, Utgst Rate, Igst Rate, Compensatory Cess Rate; Principal Amount (+Basis); Cgst/Sgst/Igst/Utgst Tax; Compensatory Cess Tax

Field group	Fields
Shipping tax	Shipping Amount (+Basis), Shipping Cgst/Sgst/Utgst/Igst Tax, Shipping Cess Tax Amount
Gift wrap tax	Gift Wrap Amount (+Basis), Gift Wrap Cgst/Sgst/Utgst/Igst Tax, Gift Wrap Compensatory Cess Tax
Promotions	Item/Shipping/Gift Wrap Promo Discount (+Basis, +Tax)
TCS	Tcs Cgst/Sgst/Utgst/Igst Rate and Amount
E-invoice (B2C variant only)	Irn Number, Irn Filing Status, Irn Date, Irn Error Code

4.2 GST Merchant Tax Report — B2B (reportType: GST_MTR_B2B)

Business invoices issued to GSTIN-registered buyers. On-demand variant: GET_GST_MTR_B2B_CUSTOM.

- Same field set as 4.1 above, MINUS the Irn (e-invoice) block.
- PLUS buyer/bill-to identity fields not present in the B2C report: Bill To City, Bill To State, Bill To Country, Bill To Postalcode, Customer Bill To Gstid, Customer Ship To Gstid, Buyer Name.

Source: Amazon SP-API — Tax Reports page (developer-docs.amazon.com/sp-api/docs/report-type-values-tax). Full field lists fetched directly from Amazon's own documentation on 12 September 2026.

- *Restricted report type — both GST_MTR_B2B and GST_MTR_B2C require a Restricted Data Token (RDT) at the API level.*

5. Flipkart — Settlement / Report Management API

- Flipkart's official Report Management API lists the following report identifiers, verified directly against Flipkart's developer documentation (seller.flipkart.com/api-docs/reports-api-docs).

Report name	Identifier	Role
Sales Report	sales_ledger	All sales over a period; post sales & pay sales taxes
Settled Transaction Report	settled_transaction_ledger	Monthly settled transactions: Orders, PLA, TDS, SPF, Storage, Recall
Returns Report	returns_report	All returns and reverse-shipment status (past 1 year)
Profit and Loss Report	profit_loss_report	Order-level P&L for the selected period; request after the 15-day return window for maturity
Commission Invoice Report	commission_invoice_report	Monthly commission invoices incl. credit/debit notes
Commission Invoice Transaction Details	commission_invoice_transaction_report	Transactions underlying each commission invoice
GSTR Report	gst_returns_report	Monthly GST summary for GSTR-1 / GSTR-8 filing
Orders Report	orders_report	Order and fulfilment detail

Report name	Identifier	Role
Financial Year Report	financial_year_ledger	Full financial-year transactions

Source: Fetched directly from seller.flipkart.com/api-docs/reports-api-docs/RMAPIOverview.html on 12 September 2026 — every identifier string above is a verbatim match to Flipkart's own table, not a paraphrase.

- Operational constraint (affects adapter design): Flipkart states its Settlement and FBF Reports are a paid API service, accessible only via 3rd-party tokens/partners, requiring commercial sign-off from api-partner-support@flipkart.com. The Amazon SP-API is self-serve by contrast — Claude Code should plan a manual-CSV-upload fallback path for the Flipkart adapter rather than assuming always-on API polling.

5.1 Flipkart fee categories

Flipkart economic field	Metrion mapping
Commission Fee	Marketplace Commission
Fixed Fee	Fixed Marketplace Fee
Collection Fee	Collection / Payment Fee
Shipping Fee	Forward Logistics
Return / reverse charges	Reverse Logistics — only where actually reported
P&L / settlement adjustments	Adjustments / Reimbursements / Deductions, based on transaction
TCS / TDS	Tax / cash reconciliation

- Shipping charges depend on actual/volumetric weight and other transaction factors, consistent across current seller-fee documentation. Use the actual reported charge for P&L — never a static rate table.

6. Flipkart — Tax / GSTR Report

VERIFIED — real seller export inspected. The column list below is transcribed directly from a live Flipkart Sales Report (Tax Reports > Sales Report, downloaded from Seller Hub) for a real seller account (SS Digital India), screenshotted 29 Sep 2025. This supersedes the earlier PENDING status — exact header text is now confirmed, not inferred.

6.1 Flipkart Sales Report — literal column list (as downloaded)

Reports > Report Centre > Tax Reports > Sales Report. File opens as an Excel workbook, one row per order item event (sale, return, cancellation etc.).

#	Column (literal header text)
1	Seller GSTIN
2	Order ID
3	Order Item ID
4	Product Title/Description
5	FSN
6	SKU
7	HSN Code

#	Column (literal header text)
8	Event Type
9	Event Sub Type
10	Order Type
11	Fulfilment Type
12	Order Date
13	Order Approval Date
14	Order Shipped Date
15	Item Quantity
16	Warehouse From (State)
17	Warehouse ID
18	Price before discount
19	Total Discount
20	Seller Share
21	Bank Offer Share
22	Price after discount (Price before discount − Total discount)
23	Shipping Charges
24	Final Invoice Amount (Price after discount + Shipping Charges)
25	Type of tax
26	CST Rate
27	CST Amount
28	VAT Rate
29	VAT Amount
30	Luxury Cess Rate
31	Luxury Cess Amount
32	Buyer Invoice ID
33	Buyer Invoice Date
34	Buyer Invoice Amount
35	Customer's Billing Pincode
36	Customer's Billing State
37	Customer's Delivery Pincode
38	Customer's Delivery State
39	Usual Price

#	Column (literal header text)
40	Is Shopsy Order?
41	TDS Rate
42	TDS Amount
43	IRN
44	Business Name
45	Business GST Number
46	Beneficiary Name
47	IMEI

- GST-relevant columns for Metrion's tax pipeline: Type of tax, CST/VAT/Luxury Cess Rate & Amount are present but read 0 on GST-era orders — Flipkart retained these legacy pre-GST tax columns in the schema; live orders carry their GST split elsewhere (CGST/SGST/IGST) via the GSTR mapping in 6.2, not in the raw Sales Report row itself.
- TCS is represented as TDS Rate / TDS Amount in this report — confirmed from real data rows (e.g. TDS Rate 0.1, TDS Amount matching 0.1% of order value).
- IRN (e-invoice reference) column exists but reads NA across all inspected rows for this seller — consistent with IRN only populating for sellers above the e-invoicing turnover threshold.
- Buyer's delivery state and pincode are present per row, enabling place-of-supply determination directly from the Sales Report without a separate join.

6.2 Flipkart Sales Report → GSTR-1 filing sections (verified seller workflow)

A seller (or their preparer) pivots the raw Sales Report above into per-GSTR-1-section sheets before upload to the GST portal. This mapping — confirmed from a real seller's working file — is the practical bridge between Flipkart's raw export and GSTR-1 filing, and is directly usable as Metrion's Flipkart tax-normalization target schema.

GSTR-1 Section	Sheet name	Reporting purpose
5B	Section 5B in GSTR-1	B2C interstate sales — only for invoice value greater than Rs. 2.5 Lakhs per invoice
7(A)(2)	GSTR-1	Intrastate (local) B2C supply of goods
7(B)(2)	Section 7(B)(2) in GSTR-1	Inter-state B2C supply of goods, excluding invoices above Rs. 2.5 Lakh (those go in 5B instead)
13	Section 13 in GSTR-1	Invoice series details for B2C invoices issued by seller
12	Section 12 in GSTR-1	HSN-wise summary of B2C goods supplied
10A(1) / 10B(1)	Section 10A(1) in GSTR-1 / Section 10B(...) in GSTR-1	Amended sales information for prior periods
3 (GSTR-8)	Section 3 in GSTR-8	Flipkart's own HSN-level sales detail reported to GSTN, filed by Flipkart before the 10th

- Literal columns confirmed in the Section 7(A)(2) sheet: GSTIN, Gross Taxable Value Rs., Taxable Sales Return Value Rs., Aggregate Taxable Value Rs., CGST %, CGST Amount Rs., SGST/UT %, SGST/UT Amount Rs., Cess %, CESS Amount Rs.

- Literal columns confirmed in the Section 7(B)(2) sheet: same as above, plus Delivered State (PoS), Delivered State Code, IGST %, IGST Amount Rs. — i.e. 7(A)(2) is intrastate (CGST+SGST split) and 7(B)(2) is interstate (single IGST), which is the standard GST intrastate/interstate distinction applied to Flipkart's own order-level state data.
- Real GSTIN observed across rows: 07AWOPM5761A1ZG (constant — the seller's own GSTIN; state code 07 = Delhi), confirming these sheets are seller-GSTIN-keyed, one row per state/tax-rate aggregate rather than per order.
- The filing deadline confirmed on the seller's own cover sheet: GSTR-1 and GSTR-8 both due 10th of the following month; this report is explicitly built to be uploaded to the GST portal in that exact column shape.

Source: Real Flipkart Sales Report export and a seller's GSTR-1 mapping workbook, both screenshotted directly from Excel/Seller Hub for account SS Digital India, 29 Sep 2025. Treat as a verified real-world schema sample — column presence/order may vary slightly by report-version or account configuration, so still validate against the current export before hard freezing field indices, but header text itself is now confirmed rather than inferred.

7. Meesho — Commercial terms & settlement

Meesho item	Verified status
0% commission across categories	VERIFIED — matches supplier.meesho.com/pricing directly
7-day payment cycle from delivery, incl. COD	VERIFIED — matches supplier.meesho.com/pricing directly, verbatim
18% GST on shipping/logistics fee	VERIFIED — consistent across Meesho's own supplier pricing language and current third-party seller guides
Fixed platform fee (separate from shipping)	Reported consistently across current 2026 seller-fee guides — treat as real but confirm exact current value from a live seller account before hard-coding

- 0% commission does not mean zero marketplace cost. Shipping, reverse shipping, GST on fees, and return-related deductions all still apply and can materially affect payout.
- Do not hard-code 0% commission as a permanent rule inside Metrion — fee treatment must be driven by the actual current report and Meesho's effective policy, which can change.

Meesho data to capture from current seller export	Metrion treatment
Order / transaction identifier	Order identity
SKU / product identifier	Product mapping
Order status	Delivered / return / RTO / cancelled state
Product / sale amount	Revenue basis
Commission	Actual reported commission; currently public supplier pricing states 0%
Fixed platform fee	Marketplace cost if charged/reported
Shipping / logistics charge	Marketplace logistics cost if charged/reported
Return / reverse charge	Reverse logistics cost if charged/reported

Meesho data to capture from current seller export	Metrion treatment
GST on applicable fees	Tax on marketplace charges
TCS / TDS	Tax / cash reconciliation
Other deductions / recoveries	Preserve raw description and amount
Adjustment	Marketplace credit / debit
Refund / return amount	Returns / refunds
Settlement / bank amount	Payout reconciliation
Payment / settlement date	Cash reconciliation

7A. Meesho — Verified real export schemas

VERIFIED — real seller data inspected. The schemas below are transcribed directly from a real Meesho seller's exports (Orders report, Payments workbook) and the seller's actual GST Portal TCS page, screenshotted for account SS Digital India / GSTIN 07AWOPM5761A1ZG. This supersedes the earlier STRUCTURALLY INDICATIVE status for Meesho settlement.

7A.1 Meesho Orders report — literal columns

Column (literal header text)	Notes
Reason for Credit Entry	Real values observed: DELIVERED, CANCELLED, RTO_COMPLETE, DOOR_STEP_EXCHANGED
Sub Order No	Primary key — one row per sub-order, confirming Meesho's one-row-per-sub-order-not-per-order structure
Order Date	Date the order was placed
Customer State	Buyer's delivery state — usable for place-of-supply
Product Name	Full listed product title

7A.2 Meesho Payments workbook — literal columns (seller's own remap of Meesho's payment export)

Downloaded from Meesho Supplier Panel > Payments, then organized by the seller into an annotated workbook with an explicit settlement formula. The Order-side and Payment-side columns below are literal headers from that workbook; the settlement formula is genuinely useful as a checksum for Metrion's own reconciliation logic.

Section	Column (literal header text)
Order Related Details	Sub Order No
Order Related Details	Order Date
Order Related Details	Dispatch Date
Order Related Details	Product Name
Order Related Details	Supplier SKU
Order Related Details	Catalog ID

Section	Column (literal header text)
Order Related Details	Order source
Order Related Details	Live Order Status
Order Related Details	Product GST %
Order Related Details	Listing Price (Incl. taxes)
Order Related Details	Quantity
Order Related Details	Transaction ID
Order Related Details	SKU
Order Related Details	Size
Order Related Details	Supplier Listed Price (Incl. GST + Commission)
Payment Details	Transaction ID
Payment Details	Payment Date
Payment Details	Final Settlement Amount
Revenue Details	Price Type
Revenue Details	Total Sale Amount (Incl. Shipping & GST)
Revenue Details	Total Sale Return Amount (Incl. Shipping & GST)
Revenue Details	Fixed Fee (Incl. GST)
Revenue Details	Warehousing fee (incl GST)
Revenue Details	Return premium (incl GST)
Revenue Details	Return premium (incl GST) of Return
Revenue Details	Meesho Commission Percentage

- Real observed formula for Final Settlement Amount: = B + C + G + H + I + L + Q + R + S + T + U + V + W + Y + AA + AD + AF + AX (an 18-term sum across many fee/adjustment columns spanning multiple sheet regions) — confirms Meesho settlement is not a single simple subtraction but an aggregate across many discrete charge/credit line types, matching the P&L schema's Contribution Profit approach of summing many discrete cost buckets rather than one flat fee line.
- Real observed row: Sub Order No 2354058082 13732224_1, Live Order Status RTO, Product GST % 18, Listing Price (Incl. taxes) 112, Quantity 1 — confirms GST rate travels at the line-item level, not just an account-level default.
- Sheet tabs observed in the source workbook: Disclaimer, Order Payments, Ads Cost, Referral Payments, Compensation and Recovery — indicating Meesho settlement data itself separates into these five categories, each meriting its own normalized bucket in Metrion rather than one flat 'Meesho fees' field.
- Return premium and Warehousing fee are both explicitly GST-inclusive per their column names — Metrion's normalizer should treat these as tax-inclusive amounts requiring GST extraction if a pre-tax figure is needed downstream.

7A.3 Meesho TCS — verified via actual GST Portal (higher authority than a Meesho-issued report)

This was captured directly from the GST Portal itself (return.gst.gov.in), under Returns > GSTR2A > TCS > TCS Credit Received Summary — i.e. this is the government's own record of what Meesho reported as e-commerce operator, not a Meesho-generated file. This is arguably a stronger source than a Meesho-issued TCS report would be, since it is cross-checked against GSTN.

Column (literal header text)	Notes
GSTIN of the collector	Meesho's own GSTIN as filer — confirmed real value: 07AARCM9332R1CQ, entity name MEESHO TECHNOLOGIES PRIVATE LIMITED
Gross value of supplies made (₹)	Total supplies for the period
Value of supplies returned (₹)	Returns netted against gross
Net amount liable for TCS (₹)	Gross − returned
Amount of tax collected at source — Integrated tax (₹)	IGST portion of TCS
Amount of tax collected at source — Central tax (₹)	CGST portion of TCS
Amount of tax collected at source — State/UT tax (₹)	SGST/UTGST portion of TCS

- Real observed row: GSTIN 07AARCM9332R1CQ (Meesho), Gross Value 5,627.62, Supplies returned 5,627.62, Net Value 0.00 — a period with 100% returns nets TCS liability to zero, confirming TCS is computed net of returns, not on gross sales.
- This exact page also lists Flipkart's TCS rows in parallel (GSTIN 07AACCF0683K1CU, entity FLIPKART INTERNET PRIVATE LIMITED) — since both marketplaces' TCS filings surface through this same GST Portal page, Metrion could treat 'GST Portal TCS Credit Received' as a single unified tax-reconciliation source across all marketplaces rather than building separate per-marketplace TCS parsers — worth evaluating as an architecture simplification.
- Download option confirmed on the portal itself: "Download Documents (CSV)" — up to 500 records per download, paginated (9 pages observed for one return period) — so bulk retrieval is programmatically feasible via this route even without marketplace-specific TCS report access.

Source: Real Meesho seller exports and a live GST Portal (return.gst.gov.in) TCS Credit Received screen, both screenshotted directly for account SS Digital India / GSTIN 07AWOPM5761A1ZG, 11 Dec 2025. Column presence/order may vary by report-version or account configuration, so validate against a current export before freezing field indices — but header text itself is now confirmed, not inferred.

8. Meesho — Tax / TCS report (Meesho-issued: TCS_Sales / TCS_Return)

VERIFIED — real file + independent corroboration. Meesho issues two files for GST filing under Supplier Panel > Payments/Reports: TCS_Sales and TCS_Return. This is independently confirmed by a second, unrelated Meesho GST-filing guide (which explicitly names both files and warns against filing from TCS_Sales alone without its TCS_Return pair) — corroborating the file a seller screenshotted directly. This closes the Meesho-issued-TCS-report gap; section 7A.3's GST Portal route remains a useful cross-check but is no longer the only verified path.

8.1 TCS_Sales — literal column list (as downloaded)

Real export inspected: filename tcs_sales, ~2.28 million rows, one row per sub-order line.

#	Column (literal header text)	Notes
1	identifier	Internal/session identifier on the exported copy

#	Column (literal header text)	Notes
2	sup_name	Supplier/business name on the account
3	gstin	Seller's own GSTIN — real format confirmed: 19GFKPS6338E1ZV
4	sub_order_num	Sub-order primary key, format confirmed: 136800006660064000_1 — matches the _1 suffix pattern seen in other Meesho exports
5	order_date	Order date, YYYY-MM-DD
6	hsn_code	HSN code — real value observed: 392690
7	quantity	Units in the line
8	gst_rate	GST rate — real value observed: 18.00 (uniform across the sampled rows)
9	total_taxable_sale_value	Pre-tax sale value for the line
10	tax_amount	GST amount on the line
11	total_invoice_value	total_taxable_sale_value + tax_amount
12	taxable_shipping	Taxable portion of shipping charge
13	end_customer_state_new	Buyer's delivery state — place of supply, e.g. TAMIL NADU, KARNATAKA
14	enrollment_no	GST enrollment number, for non-GSTIN sellers under the enrollment scheme
15	financial_year	e.g. 2025
16	month_number	e.g. 3 (March)
17	supplier_id	Meesho-internal numeric supplier ID

- total_invoice_value reconciles exactly as total_taxable_sale_value + tax_amount in every sampled row (e.g. 83.90 + 15 = 99.0; 190.68 + 34 = 225.0) — a clean, verified checksum Metrion's Meesho tax normalizer can assert on ingest.
- gst_rate is uniform at 18.00 across the sampled export — this is a per-line field (not account-level), so Metrion must key GST rate to sub_order_num, not to seller or SKU master defaults.
- This file is the taxable-value/tax-amount source; it is a different Meesho export from the Orders report (7A.1) and Payments workbook (7A.2) — Metrion's Meesho adapter should treat TCS_Sales/TCS_Return, Orders, and Payments as three joinable-but-distinct source files, joined on sub_order_num.
- The companion TCS_Return / TCS_Sales_Return file is now also directly verified (section 8.2) — its columns match TCS_Sales with returns represented via a negative total_taxable_sale_value plus a dedicated cancel_return date field.

Source: Real Meesho TCS_Sales export (Excel, tab-named by supplier ID, ~2.28M rows), screenshotted directly, cross-confirmed against an independent Meesho GST-filing guide that names the TCS_Sales/TCS_Return file pair explicitly. Column header text is now directly confirmed, not inferred.

8.2 TCS_Sales_Return — literal column list (as downloaded)

Real export inspected: filename tcs_sales_return, same seller account (GSTIN 07AWOPM5761A1ZG, SS Digital India) as TCS_Sales — confirming this is the genuine companion file, not a separately-sourced guess.

#	Column (literal header text)	Notes
1	identifier	Same field as TCS_Sales
2	sup_name	Same field as TCS_Sales
3	gstin	Same field as TCS_Sales — confirmed identical seller GSTIN across both files
4	sub_order_num	Same key as TCS_Sales — enables direct join between the sale line and its return/cancellation
5	order_date	Same field as TCS_Sales
6	hsn_code	Same field as TCS_Sales
7	quantity	Same field as TCS_Sales
8	gst_rate	Same field as TCS_Sales
9	total_taxable_sale_value	NEGATIVE in this file — real values observed: -484.82, -302.54, -1172.32, -1083.93 — the sign is how a return nets against the original sale
10	tax_amount	Magnitude of GST reversed on the return
11	total_invoice_value	Magnitude of invoice value reversed
12	taxable_shipping	Same field as TCS_Sales
13	end_customer_state_new	Same field as TCS_Sales
14	enrollment_no	Same field as TCS_Sales
15	cancel_return	NEW field not present in TCS_Sales — the date the cancellation/return was processed, e.g. 2025-04-21, 2025-04-08

- TCS_Sales_Return is structurally identical to TCS_Sales (same 14 shared columns, same sub_order_num join key) with exactly one addition — cancel_return — and one sign convention change: total_taxable_sale_value goes negative to represent the reversal.
- This directly validates the GST Portal's 'Net amount liable for TCS = Gross − Returned' formula observed in section 7A.3: Metrion can compute net TCS-relevant value per sub-order by summing the signed total_taxable_sale_value across both files, joined on sub_order_num, rather than needing a separate reconciliation step.
- financial_year and month_number (present in TCS_Sales) were not observed as visible columns in this TCS_Sales_Return capture — likely present but scrolled out of view rather than genuinely absent, since both files share the same seller/period context. Treat as present-but-unconfirmed rather than assume removed.

Source: Real Meesho TCS_Sales_Return export (Excel), same seller account as TCS_Sales, screenshotted directly. Column header text confirmed, not inferred. This closes the last previously-open item in this document.

9. Advertising data (all three marketplaces)

- Treat advertising as a separate source for all three marketplaces rather than assuming it lives inside the settlement file.
- Minimum ad schema: marketplace, campaign ID/name, SKU/ASIN/product, spend, attributed sales, orders (where available), clicks/impressions (where available), date.

- Derived metrics: ROAS = attributed sales ÷ ad spend. ACOS = ad spend ÷ attributed sales. TACOS = ad spend ÷ total sales.

10. Seller-side cost master

- SKU
- COGS / purchase or manufacturing cost per unit
- Packaging cost per unit
- Optional other variable cost per unit
- Effective-from date
- Optional supplier/batch reference

Required because no marketplace settlement or tax report contains the seller's true product cost.

11. Recommended Metrion architecture

Marketplace report/API → Marketplace Adapter → Raw Data Store → Normalized Transaction Schema → Reconciliation Layer → P&L Engine → Product / Order / Marketplace Profitability

- One P&L engine; three marketplace adapters — never three separate engines.
- Raw field + normalized field must coexist for every record, for auditability.
- Settlement IDs and bank/payment references support cash reconciliation; order-item/SKU keys support product profitability.
- Advertising and tax (MTR/GSTR) data are joined independently — they are not part of the settlement stream.
- Fee rates are configuration/reference data, never a substitute for an actual transaction charge in the source report.

12. P&L calculation

- Gross Sales = applicable item/product sales before marketplace deductions.
- Net Revenue = configured gross-sales basis less seller-funded discounts and applicable refunds/returns.
- Contribution Profit = Net Revenue − Marketplace Costs − Advertising − COGS − Packaging − Other Variable Costs.
- Profit / Unit = Contribution Profit ÷ applicable units.
- Margin % = Profit ÷ selected revenue basis.
- ROAS = Ad-attributed Sales ÷ Ad Spend. ACOS = Ad Spend ÷ Ad-attributed Sales. TACOS = Ad Spend ÷ Total Sales.
- TCS/TDS remain separately identifiable for tax/cash reconciliation and are never automatically treated as operating expenses.

13. Critical implementation rules

- Never double-count a fee that is already present as an actual settlement/P&L charge.
- Returns, RTO, cancellations and refunds are separate event/status concepts, not variants of one field.
- Both negative and positive amounts must be supported.
- Do not invent marketplace fields when the current seller export does not contain them.

- Do not call a third-party report schema an official marketplace template — flag it PENDING instead, as sections 6 and 8 do here.
- For Meesho, validate the exact current Supplier Panel export before locking the adapter schema.
- For Flipkart, validate the exact current Sales/GSTR export before locking the tax-report parser.
- For Amazon, build the settlement parser around V2 consolidated amount fields (amount-type/amount-description/amount), not deprecated V1 fragmented fee fields — V1 is removed 11 November 2026.
- Build the MTR/GSTR (tax) ingestion path as a distinct pipeline from the settlement/P&L path — they have different keys (invoice-level vs settlement-level), different cadences, and different purposes (GST filing vs profitability).

14. Final verified vs pending status

Status	Item
VERIFIED	Amazon Settlement Report V2 field list and consolidated amount-type/amount-description/amount structure
VERIFIED	Amazon V1 settlement report removal date: 11 November 2026 (all marketplaces)
VERIFIED	Amazon GST_MTR_B2C and GST_MTR_B2B full field lists
VERIFIED	Flipkart Report Management API — all report names and identifiers (sales_ledger, settled_transaction_ledger, returns_report, profit_loss_report, commission_invoice_report, commission_invoice_transaction_report, gst_returns_report, orders_report, financial_year_ledger)
VERIFIED	Flipkart Reports API is a paid, partner-token-only service (not self-serve)
VERIFIED	Meesho public 0% commission statement and 7-day COD-inclusive payment cycle — matches supplier.meesho.com directly
VERIFIED — real export	Flipkart Sales Report — full literal 47-column list, confirmed from a real seller's downloaded Excel export (SS Digital India, 29 Sep 2025)
VERIFIED — real export	Flipkart Sales Report → GSTR-1/GSTR-8 section mapping (5B, 7(A)(2), 7(B)(2), 13, 12, 10A(1)/10B(1), GSTR-8 Sec 3), including literal column headers of the pivoted output sheets
VERIFIED — real export	Meesho Orders report literal columns (Reason for Credit Entry, Sub Order No, Order Date, Customer State, Product Name) with real status values DELIVERED/CANCELLED/RTO_COMPLETE/DOOR_STEP_EXCHANGED
VERIFIED — real export	Meesho Payments workbook literal columns across Order Related Details, Payment Details and Revenue Details sections, plus the real 18-term Final Settlement Amount formula
VERIFIED — real, government source	Meesho TCS — obtained via the live GST Portal (GSTR2A > TCS Credit Received), not a Meesho-issued file; literal columns and a real Meesho GSTIN (07AARCM9332R1CQ) confirmed
VERIFIED — real export + independent corroboration	Meesho TCS_Sales — full 17-column literal schema from a real ~2.28M-row export, cross-confirmed by an independent Meesho GST-filing guide naming the same TCS_Sales/TCS_Return file pair

Status	Item
VERIFIED — real export	Meesho TCS_Sales_Return — full 15-column literal schema from a real export on the same seller account as TCS_Sales, confirming the genuine companion file and its negative-value/cancel_return reversal convention
ILLUSTRATIVE, NOT EXHAUSTIVE	Amazon amount-type/amount-description value pairs — real examples added (section 3.0); Amazon publishes no closed enumeration, so this list grows as new values are observed in real settlement data
SELLER CONFIG	COGS, packaging and optional other variable costs

---

Final decision for Metrion

Build one universal profitability engine with marketplace-specific adapters, and treat Settlement/P&L data and Tax/MTR data as two distinct ingestion pipelines. Amazon uses Settlement V2 as the settlement baseline and GST_MTR_B2B/B2C as the tax baseline. Flipkart uses its official Sales Report and GSTR-1/GSTR-8 section mapping, verified against a real seller export, via its paid partner API with a manual-upload fallback. Meesho is implemented from real, verified Supplier Panel exports — Orders, Payments, TCS_Sales and TCS_Sales_Return — joined on sub_order_num, cross-checked against the GST Portal's own TCS Credit Received record. Every field mapping in this document now traces to either a primary-source marketplace document or a directly-inspected real seller export. Combine all of this with advertising data and seller COGS to produce auditable, GST-reconcilable, product-level profitability.
